

## • *Dealing with electronic disturbances to your vehicle*

It is possible that the remote control on your vehicle's locking system may be affected on the Pinnacle of Mount Wellington. This is due to the receiver in your vehicle not working where the signals from FM radio and television transmitters are very strong.

The Transmissions do not however pose a danger to humans or animals.

### **OPENING THE DOORS**

If the remote control does not unlock the vehicle then you should:

- try repeatedly pushing the unlock button while you hold the key near the bottom of the windscreen and window on the driver's side;
- try holding it behind the wheel in the right front wheel arch whilst pushing the unlock button;

If the remote control still fails to work, then open the door manually with the key.

### **STARTING THE VEHICLE**

If your vehicle fails to start it means the anti-theft electronics have not been disarmed. Try holding the key close to the dashboard whilst pushing the unlock button; moving it around to different places may help however above the driver's left knee is often the best place.

If you have a metallic windscreen or sunshade then try putting it up as it will help reflect unwanted radio waves away from the receiver.

If your vehicle still won't start, then try moving the vehicle a few metres. Radio fields often change very quickly along the ground, and you'll probably move it from a strong spot to a weak one and the pushbutton will work.

Remember, you don't have full braking ability without the engine running.

### **EMERGENCY CONTACTS**

If you still experience difficulties, then please contact Hobart City Council officers on the following numbers:

**Mountain Park Depot: 6223 1216**

(7.30am - 4.30pm)

**After Hours Emergency Services: 6278 0200**

(4.30pm - 7.30am)

Otherwise you can also call the RACT on 131 111 for assistance.
